Topology

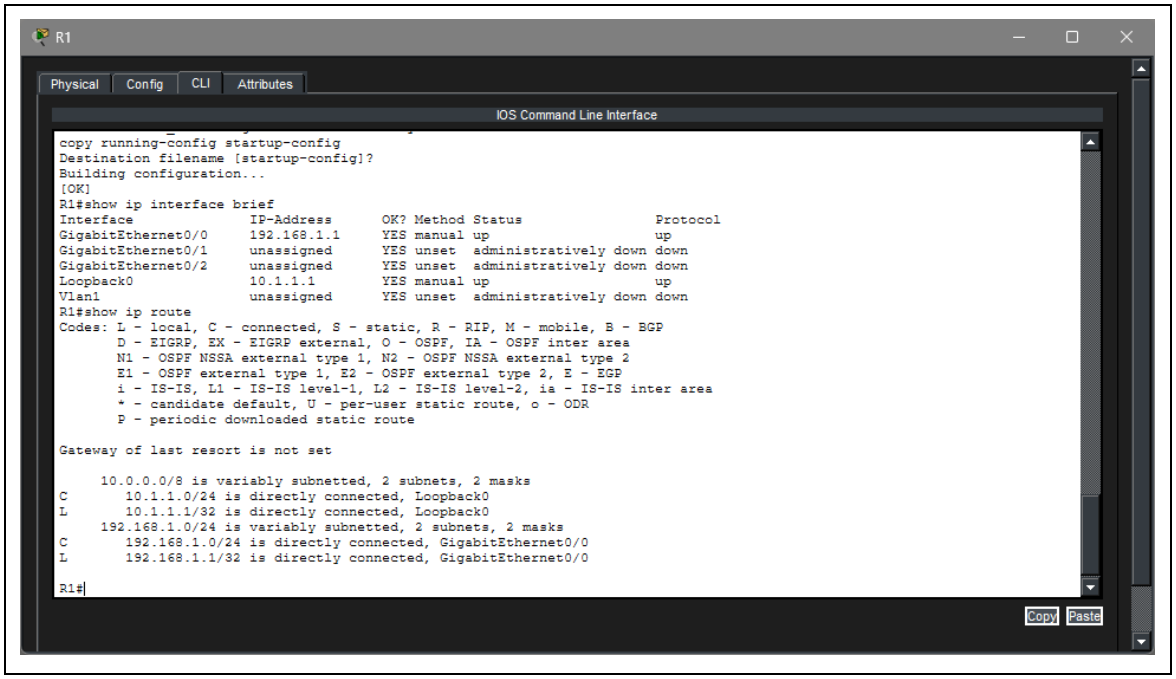

Task 05 — Routing Table

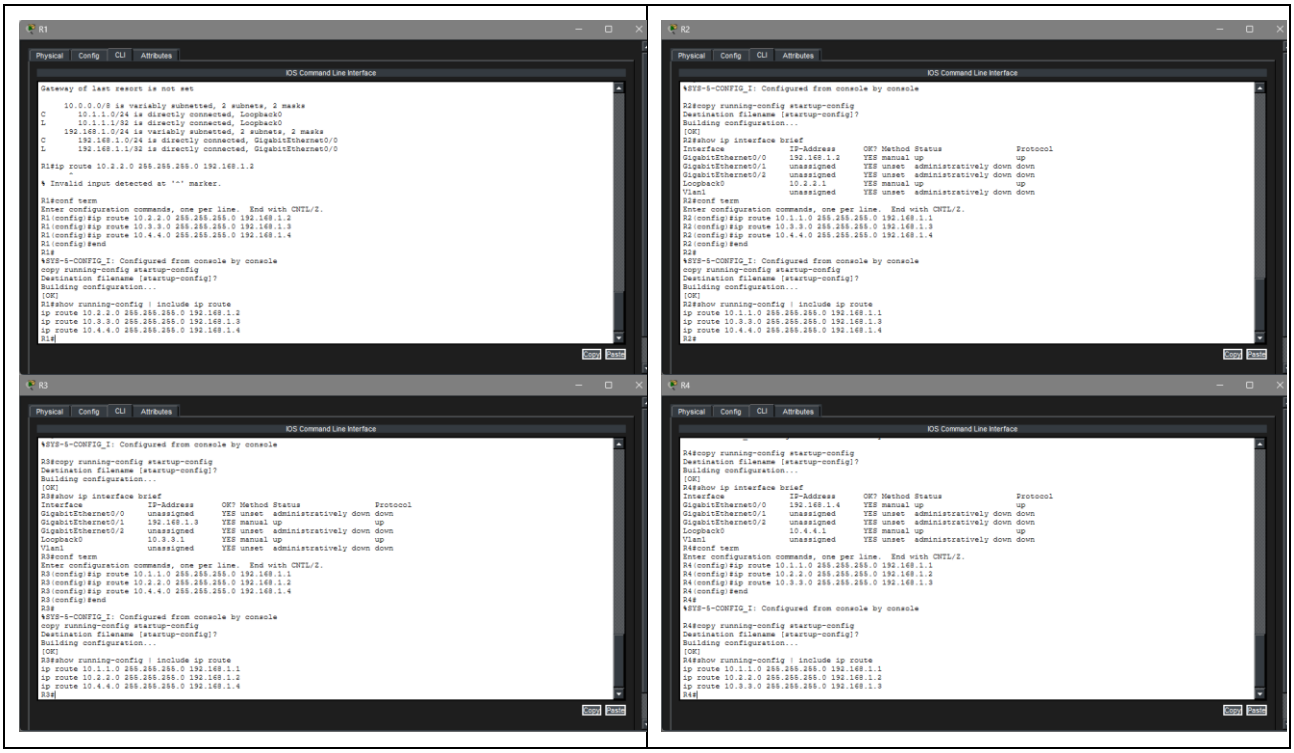

Task 06 — IP Addresses

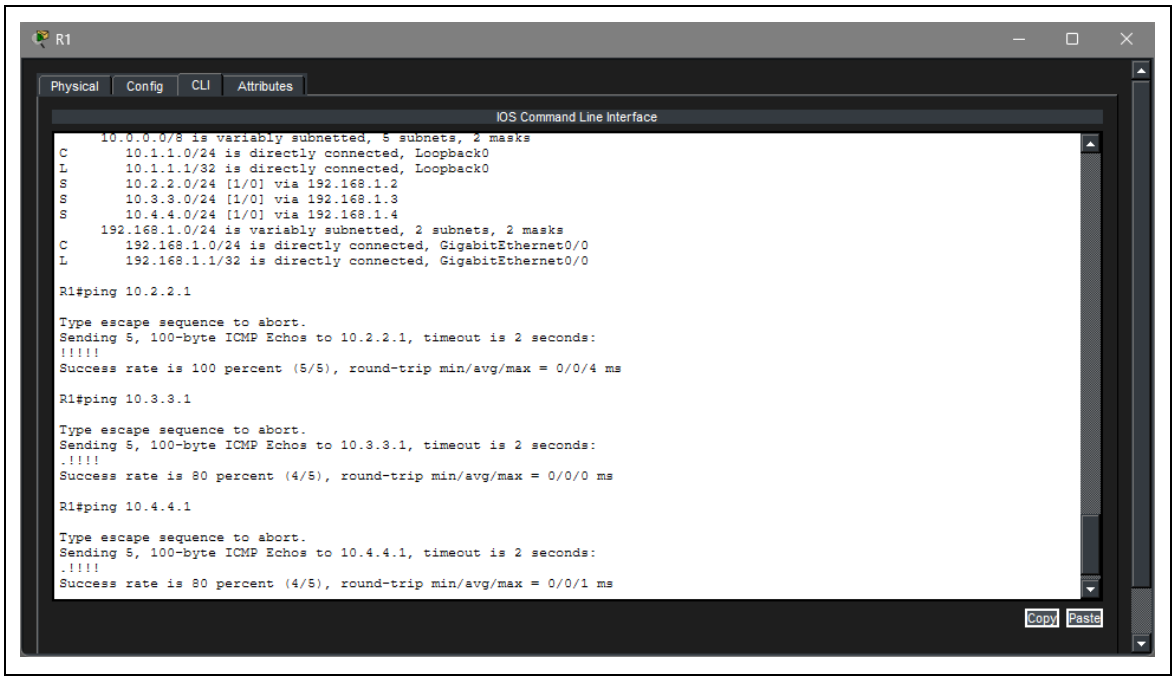

Task 07 – Confirm Routes

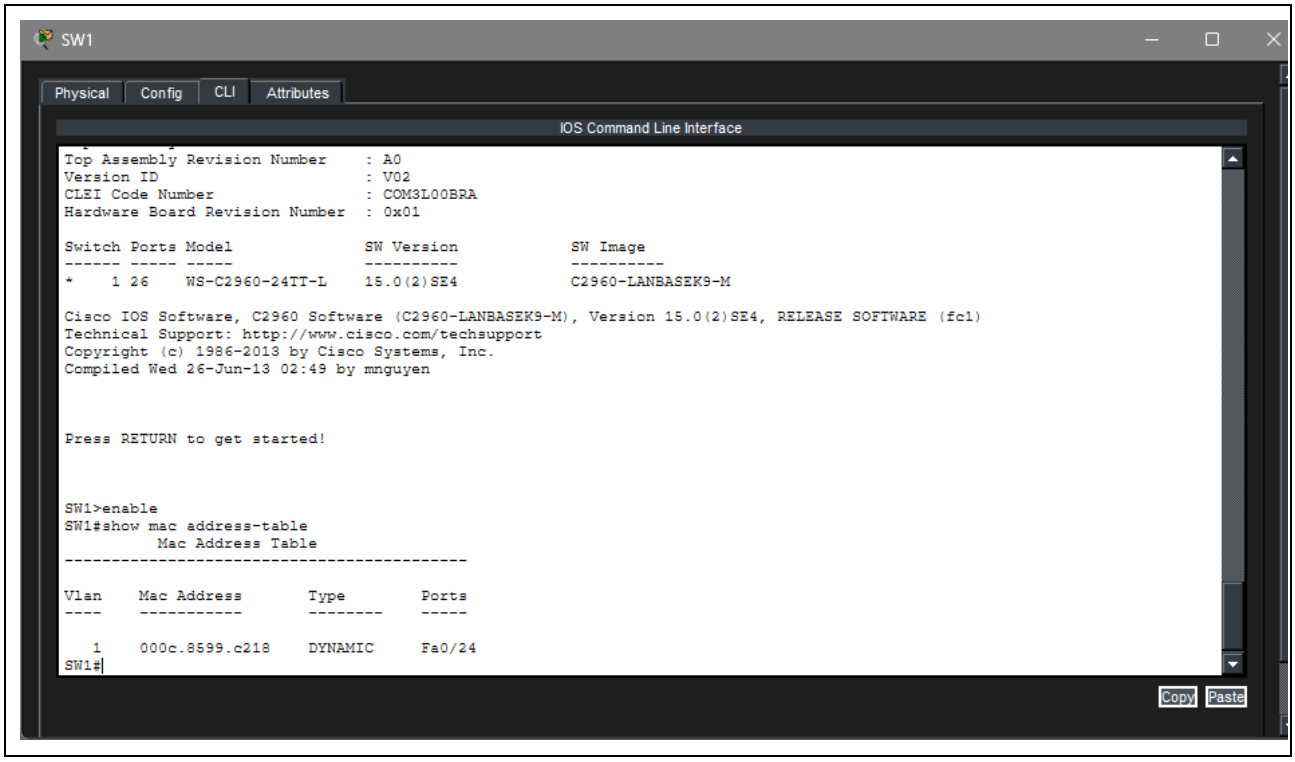

Task 08 — Static Routes

Task 09 — Confirm Static Routes

Task 10 — MAC Address Table

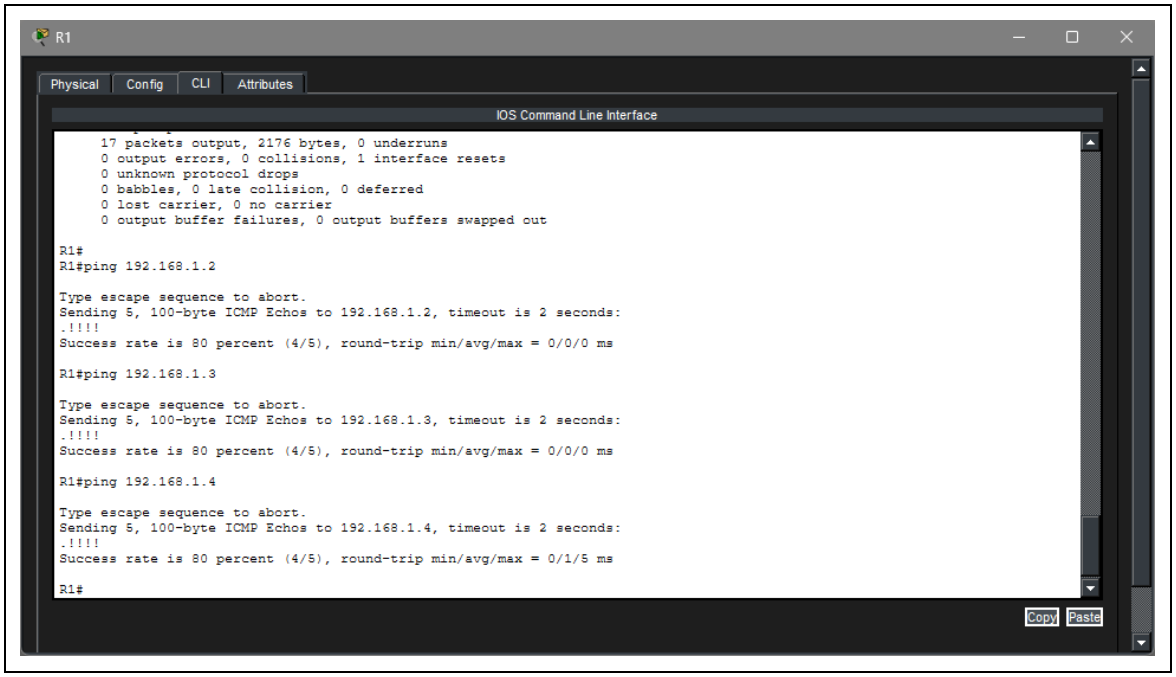

Task 11 — MAC Addresses

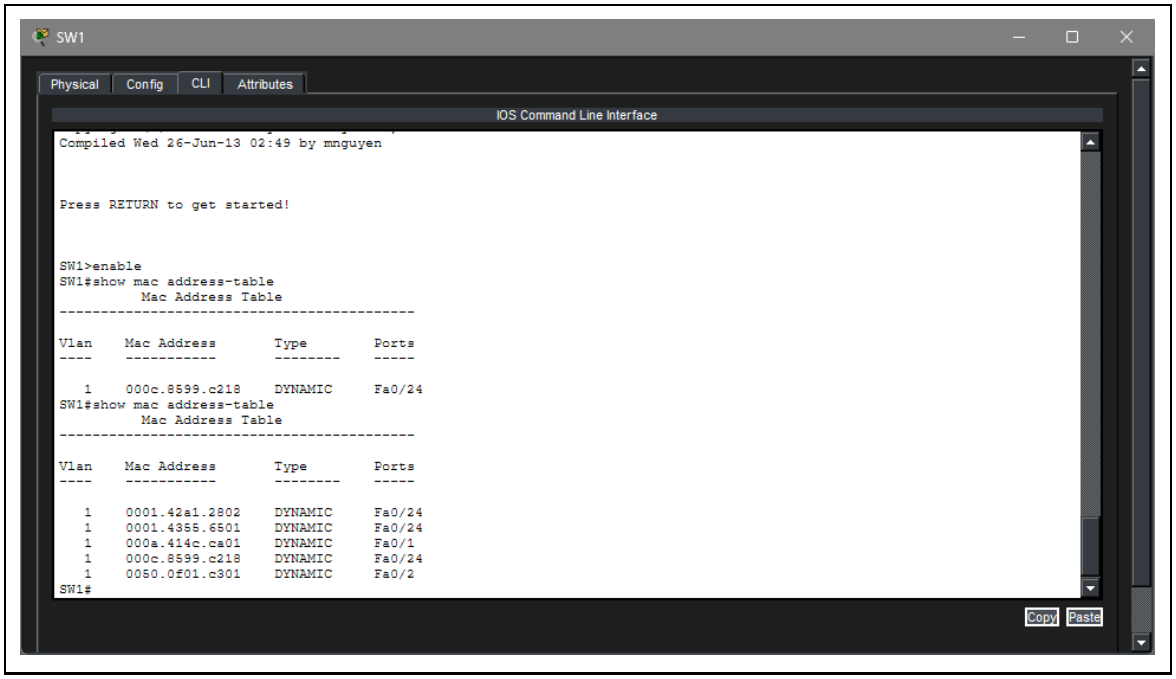

Christiaan van Wyk
20261193

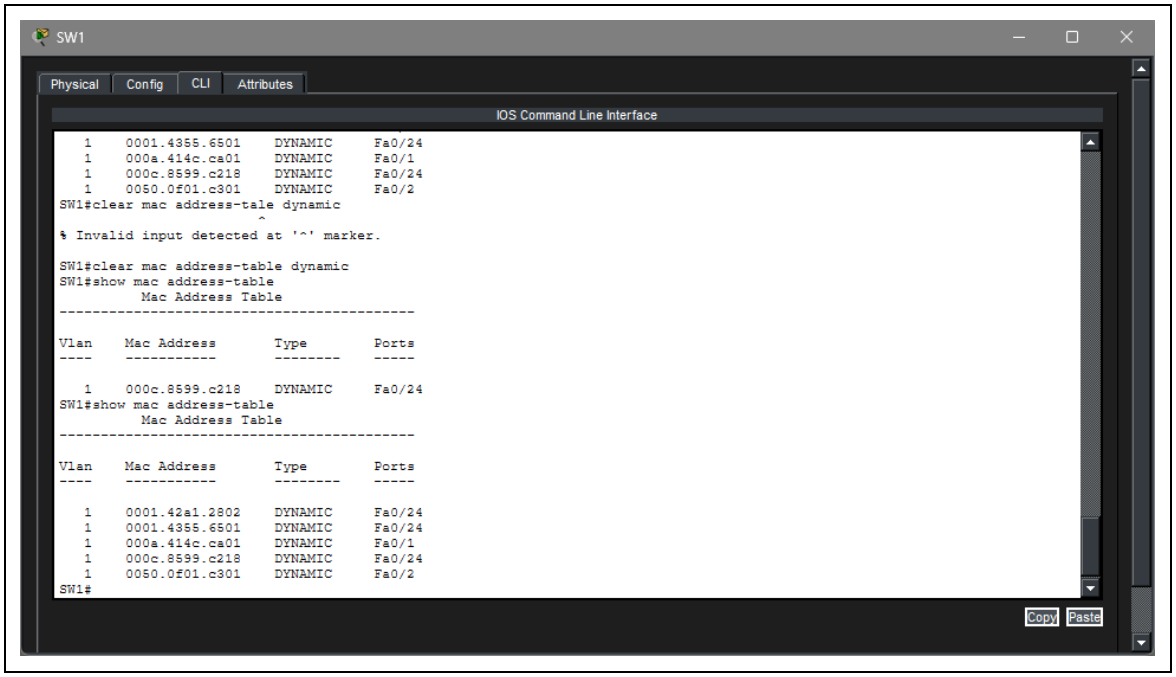

Task 12 – Verify Connectivity

Task 13 — Verify MACs

Task 14 —

Reflection Questions

Task 15 – Address Reappearance

Yes after clearing the address table I do see MAC address reappear almost immediately. This is because the switch builds the table dynamically by inspecting the MAC address of every frame that arrives on its ports. This means that the moment a frame is sent from a device the switch relearns the address for the port that it arrived from.
